

WORKERS' COMPENSATION EXPOSURE INCIDENT REPORTING

**KEEP A COPY FOR
YOUR RECORDS**

Exposure incident forms are used to voluntarily report an unexpected workplace incident exposure from:

- leaks,
- spills,
- ruptures,
- unanticipated emissions,
- explosions,
- release of dangerous chemicals or physical substances,
- contact with infectious substances or biological agents.

The purpose of these forms is:

- to obtain information about the exposure incident experienced by the worker should an illness or disease occur in the future, and
- to help the WSIB gather information about the exposure incident so they can process a claim if worker(s) experience an illness or disease in the future.

Remember!

- Exposure forms should only be submitted for an unexpected workplace exposure event with **no lost time** and **no illness**.
- The forms are used to report (or bookmark) an exposure in the event the worker experiences illness or disease in the future.
- If the worker is experiencing an illness and needs medical treatment, (e.g., diagnostic tests, prescribed medication or ongoing treatment) as a result of the incident, they should file a Report of Injury/Disease. **(Form 6)**

To report a workplace exposure the **worker** may complete one of these forms:

- Worker's Exposure Incident Form (3958A) (PEIR)
https://www.wsib.ca/sites/default/files/2021-04/3958a_workerexposureincidentform.pdf
